WATER WELL AND GROUND-WATER CHEMICAL ANALYSIS DATA, SUTTON COUNTY, TEXAS

PURPOSE AND SCOPE

The purpose of this report is to present basic ground-water data collected in Sutton County during a field investigation conducted from December 1968 to March 1969. Historical records pertinent to this investigation have also been included.

The investigation in Sutton County is part of an overall regional investigation of the ground-water resources of the Edwards Plateau, a study encompassing all or parts of 26 counties. The Edwards Plateau study will determine and describe the occurrence, availability, and chemical quality of the ground-water resources in the region.

This report contains the basic data collected in Sutton County and is one of a series of similar basic data reports on selected counties in the Edwards Plateau region. Reports in this series have been published for Schleicher, Glasscock, Reagan, and Irion Counties.

LOCATION AND EXTENT

Sutton County is located in the southwestern part of Texas in the physiographic province known as the Edwards Plateau (Figure 1). It is situated approximately between 100° and 101° west longitude and $30^{\circ}15'$ and $30^{\circ}45'$ north latitude. The county is bounded by Val Verde and Edwards Counties on the south, Crockett County on the west, Schleicher County on the north, and Kimble County on the east. Sutton County covers an area of 1,493 square miles and ranges in elevation from about 1,900 to 2,300 feet above mean sea level.

METHOD OF INVESTIGATION

Collection of data presented in this report was accomplished for the most part between December 1968 and March 1969. Initially, the United States Department of Agriculture office of Agricultural Stabilization and Conservation was visited to obtain information about location of the farms and ranches throughout the county.

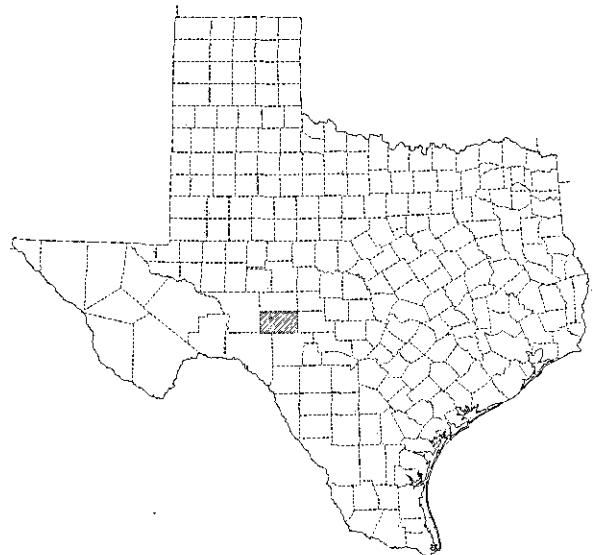

Figure 1.—Location of Sutton County

A representative number of springs and wells, including domestic and livestock, irrigation, industrial, and public supply wells, were visited throughout the county. Public officials and individual landowners and lessees were contacted in order to obtain all available information on each well. Where possible, the static water level and depth of each well were measured, and water samples for chemical analysis were taken from representative wells. The altitude of the land surface at each well location was determined from topographic maps. A total of 494 wells were inventoried (Table 1), and 234 water samples were collected for chemical analysis (Table 2).

HISTORICAL DATA

Previous water-level measurements and chemical analyses on wells and springs which are in the files of the Texas Water Development Board have also been included in the tables of this report for comparison purposes. These data were collected in 1960 and 1961 during a reconnaissance investigation of ground-water resources in the Colorado River basin, and in 1959 to 1961 during a reconnaissance investigation of ground-water resources in the Rio Grande basin.

WELL-NUMBERING SYSTEM

The numbers assigned to wells and springs in this report conform to the statewide well-numbering system used by the Texas Water Development Board. Each well is assigned a number to facilitate record keeping, electronic data processing, and locating the well within the State. The system is based on division of the State into quadrangles formed by lines of latitude and longitude, and repeated divisions of these quadrangles into smaller ones as illustrated in Figure 2.

The largest quadrangle, a 1-degree quadrangle, is divided into sixty-four 7½-minute quadrangles. Each 1-degree quadrangle in the State has been assigned a number for identification. The 7½-minute quadrangles are numbered consecutively from left to right beginning in the upper left hand corner of each 1-degree quadrangle. The 2½-minute quadrangles in each 7½-minute quadrangle are similarly numbered from 1 to 9.

The first two digits of a well number identify the 1-degree quadrangle, the third and fourth digits identify the 7½-minute quadrangle, the fifth digit identifies the 2½-minute quadrangle, and the last two digits designate the order in which the well was inventoried within the 2½-minute quadrangle. In addition to the 7-digit well number, a 2-letter prefix is used to identify each county. The prefix for Sutton County is XS.

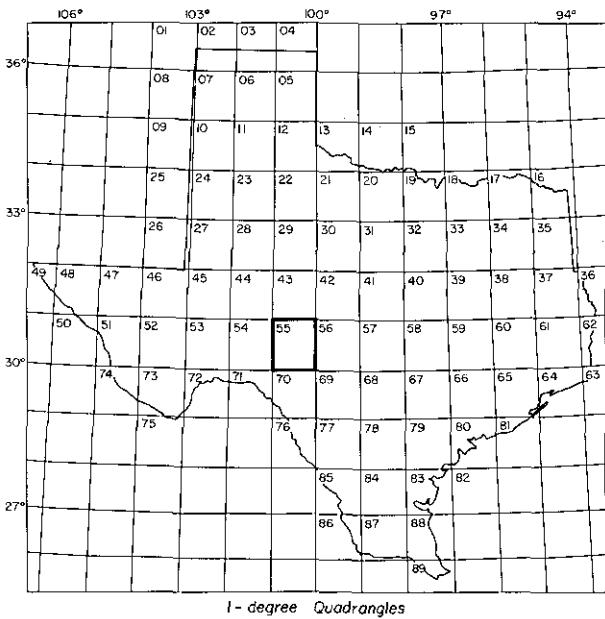

On the well location map (Figure 3), only the last three digits of the well number are shown at the location of the well; the second two digits are shown in the northwest corner of each 7½-minute quadrangle. The first two digits are not shown on the map since Sutton County is located entirely within 1-degree quadrangle 55.

ACKNOWLEDGEMENTS

The authors extend their thanks to the numerous individuals in Sutton County whose cooperation contributed to the success of this investigation. Particular appreciation goes to Mr. E. B. Keng of the United States Department of Agriculture Soil Conservation Service, who was helpful in many ways. Also, our gratitude for the services of the various county officials, ranchers, and farmers; personnel of the United States Department of Agriculture office of Agricultural Stabilization and Conservation; and others who gave of their time to supply information.

PERSONNEL

Texas Water Development Board personnel who assisted in collecting and compiling data included in this report are Daniel A. Muller and James R. Pool, Geologists, and Kenneth Jackson, Technician.

Table 1.--Records of Wells and Springs in Sutton County

All wells are drilled unless otherwise noted in remarks.

Water bearing unit : Qal, Quaternary alluvium; Kea, Edwards and associated limestones; Kt, Trinity sand; P, Permian rocks.
Altitudes of land surface : Determined by topographic maps.
Water levels : Reported water levels given in feet; water levels measured with an electric line are given in feet and tenths of a foot; water levels measured with a steel tape are given in feet, tenths, and hundredths of a foot.
Method of lift and type of power: C, cylinder; E, electric; G, natural gas, butane, or gasoline; N, none; S, submersible; T, turbine; W, windmill.
Use of water : D, domestic; Ind, industrial; Irr, irrigation; N, none; P, public supply; S, livestock.

* For chemical analysis of water, see Table 2.

Table 2.--Chemical Analyses of Water From Wells and Springs in Sutton County

Analyses are grouped in this table by water-bearing unit. The analyses were performed by the Texas State Department of Health except as indicated by footnote. The results are in milligrams per liter except percent sodium, specific conductance, pH, and sodium-adsorption ratio.

WELL	OWNER	DEPTH OF WELL	DATE OF COLLECTION	SILICA (SiO ₂)	CALCIUM (Ca)	MAGNESIUM (Mg)	SODIUM (Na)	BICARBONATE (HCO ₃)	SULFATE (SO ₄)	CHLORIDE (Cl)	FLUORIDE (F)	NITRATE (NO ₃)	DISOLVED SOLIDS	TOTAL HARDNESS AS CaCO ₃	PERCENT SODIUM	SPECIFIC CONDUCTANCE (MICROMhos at 25°C)	pH	SODIUM ADSORPTION RATIO (SAR)
