Table 4.2-9 Updated Project Costs

from Nancy Clemens

CONSTRUCTION CAPITAL COST SUBTOTAL				
Dams & Reservoirs				\$112,617,000
Relocations (conflict resolution)		L.S.		\$33,194,300
Construction Capital Costs (CCC) Subtotal:				\$145,811,300
OTHER PROJECT COSTS				
Engineering & Other Fees (35% of Total Construction)				\$51,034,000
Land Cost				\$56,797,490
Land Purchase	62,125	Ac.	\$550.00	\$34,168,750
Easements	10,700	Ac.	\$412.50	\$4,413,750
Lignite	3,540	Ac.	\$425.00	\$1,504,500
Acquisition (15% of land purchase & lignite)		L.S.		\$5,350,988
Contingencies (25% of land, easements, lignite, acquisition)		L.S.		\$11,359,497
Studies, Mitigation, Permitting				\$66,678,490
Environmental Studies		L.S.		\$500,000
Archeological Studies (pmf pool)	77600	Ac.	\$10.00	\$776,000
Geotechnical Studies		L.S.		\$1,938,000
Mitigation Costs (equal to land cost)		L.S.		\$56,797,490
Permitting		L.S.		\$6,667,000
Interest During Construction (4 yrs. at 6% with 4% return)				\$18,206,000
Other Project Costs Subtotal:				\$192,715,980
Dec. 1998 Subtotal:				\$338,527,280
20-City Average Escalation Factor	31.9%			\$107,990,210
OPINION OF PROBABLE PROJECT COST				\$446,518,000

1. Original cost estimates were taken from COE, 1989.
2. The 35 percent engineering and other fee includes the engineering design costs listed in the original estimate.
3. Mitigation costs were included.

Marvin Nichols Reservoir - approx 72,000 acres

March 11, 2010

Thank you for allowing me a few moments to speak. I appreciate the time and effort each of you have put forth while serving on this commission.

I am speaking on behalf of the Clarksville City Council , the citizens I am representing , and the Red River County Water Control & Improvement District, (WCID) Board of Directors.

We feel the most important step now is for the Sulphur River Basin Authority to complete the "U.S. Army Corps of Engineers Sulphur River Basin Feasibility Study." A basin-wide perspective to analyze and develop a reasonable approach to answer questions and concerns. The ability to find accurate facts and answers to questions that are presently speculation. We understand this is necessary before a project can move forward and to truly gain an understanding of the impacts, both positive and negative, that any of the projects produce.

I have with me today resolutions passed by the Clarksville City Council and various boards dating from 2002 - 2010 stating support for the needed studies.

The city is also a member of the Northeast Texas Water Coalition and a resolution is included with the others. We feel, as do others, that the Marvin Nichols will bring economic development and an appreciable amount of water to meet the long term needs for a potable water source in the Northeast Texas Region. Water for future generations of families in our corner of the world to ensure these families and others have all the resources needed to foster job creation and economic development. But, we are not saying build at any cost. That would not be rational either . There are questions that need to be answered, a study that needs to be done.

Region D stating the Marvin Nichols should not be in their plan or any other plan is also not rational thinking. None of us can predict the future. If everyone thought that way, we would not have water

today. There could very well be not as much water far as long as some seem to think. What is an excess? Please don't take options off the table. We must leave something behind that future generations can use to their benefit, and this is a big concern in Clarksville/ Red River County.

As I address both Region C and Region D today, The City of Clarksville and the Red River County Water Control and Improvement District would like to go on record stating that there are three (3) sites for future water development in Red River County. Pecan Bayou, Big Pine and Marvin Nichols. We are willing to work with interested parties in developing a reliable and dependable long term supply of surface water and you can be assured we would not be greedy. We need surface water.

Red River County Region consists of 1,058 square miles with a population density of 13.53 per square mile compared to statewide density of 79.54 with natural amenities reflecting an overall percent of surface water of 0.7 percent compared to 2.5 percent statewide. Resource rich, but poor in water availability.

We ask that the Basin Wide Feasibility Study be completed as quickly as possible. If the study turns out to be positive for the Marvin Nichols then we ask that everyone sit down at the table and work together to make this project a WIN-WIN for all concerned. Make it benefit both regions. The final outcome must be what is best for all Texans.

Thank you

A handwritten signature in blue ink, appearing to read "Ann Rushing". The signature is fluid and cursive, with a long, sweeping tail that extends downwards and to the right.

Mayor Ann Rushing

City of Clarksville

RESOLUTION NO. 2010-02

WHEREAS, the Sulphur River Basin Authority has been duly authorized by the State of Texas to develop all future water resources within the Sulphur River Basin, and

WHEREAS, the Clarksville City Council is aware that in order to factually determine the total impact of all present and future water resources there must first be a "Basin Wide Study" so that a project can move forward; and

WHEREAS, the City Council, of the City of Clarksville, has a very futuristic approach and of the belief that to fully address our needs and those of future generations we must glance to the future and plan now for the next 50 years, and;

WHEREAS, Clarksville/Red River County is designated as an economically disadvantaged community that would greatly benefit from an additional surface water source for municipal, economic and recreational needs; and

WHEREAS, the Clarksville City Council wishes to place the most emphasis on support of first completing the U.S. Army Corps of Engineers Sulphur River Basin Feasibility Study, which includes a review of strategies and reservoir projects; namely Marvin Nichols/Wright Patman/and Parkhouse Sites, in order to gain an understanding of the impacts both positive and negative, that any of these projects produce.

NOW, THEREFORE, BE IT RESOLVED, BY THE CLARKSVILLE CITY COUNCIL OF THE CITY OF CLARKSVILE, TEXAS:

That the City Council, of the City of Clarksville, continue to support all efforts by the Sulphur River Basin Authority to complete the U.S.Army Corps of Engineers "Sulphur River Basin Feasibility Study", as quickly as possible, so that factual information may be obtained for use in evaluating water resource development in the Sulphur Basin.

PASSED AND APPROVED on the 16th day of February, 2010.

Mayor Ann Rushing

ATTEST:

Penny Hobbs, City Secretary

City of Clarksville

RESOLUTION NO. 2005-21

WHEREAS, the City Council, of the City of Clarksville, Texas, recognizes the significant impact that the Marvin Nichols Reservoir could have on the economy and citizens of Clarksville, and ;

WHEREAS, there are certain feasibility studies needed on the Proposed Marvin Nichols Reservoir to identify the effect the reservoir would have on Clarksville, and;

WHEREAS, the City Council, of the City of Clarksville has a very futuristic approach and believe to fully address our needs and those of future generations we must glance to the future and plan now for the next 50 years, and;

WHEREAS, the City Council, of the City of Clarksville, realizes there could be some set backs in some areas; but firmly believe the Marvin Nichols Reservoir will supply water and recreational and economic benefits badly needed in Clarksville and the good will far exceed any negative aspects.

NOW, THEREFORE, BE IT RESOLVED, BY THE CITY COUNCIL, OF THE CITY OF CLARKSVILLE, TEXAS:

That the City Council, of the City of Clarksville, continues to support the Marvin Nichols Reservoir, continues to support future studies in an effort to form educated and rational decisions and continues to recognize and acknowledge the economic, recreational and water benefits to reap from building a reservoir such as the Marvin Nichols.

PASSED AND APPROVED on the 19th day of July, 2005.

Honorable Ann Rushing, Mayor

ATTEST:

Penny Hobbs, City Secretary

City of Clarksville

RESOLUTION NO. 2002-33

WHEREAS, the City Council, of the City of Clarksville, Texas, recognizes the significant impact that the Proposed Marvin Nichols Reservoir could have on the economy and citizens of Clarksville, and;

WHEREAS, there are certain economic and feasibility studies needed on the Proposed Marvin Nichols Reservoir to identify the effect the reservoir would have on Clarksville, and;

WHEREAS, the Sulphur River Basin Authority has been duly authorized by the State of Texas to develop all future water resources within the Sulphur River Basin, and;

WHEREAS, the City Council, of the City of Clarksville, wishes to support any and all studies conducted on the Proposed Marvin Nichols Reservoir so that citizens will have facts on which rational opinions may be formed.

WHEREAS, the Region D Planning Committee has included the Proposed Marvin Nichols Reservoir in the Region D Plan, and;

WHEREAS, the Texas State Water Development Board has included the Proposed Marvin Nichols Reservoir in the State Water Plan;

NOW, THEREFORE, BE IT RESOLVED, BY THE CITY COUNCIL OF THE CITY OF CLARKSVILLE, TEXAS:

That the Region D Planning committee and the Texas State Water Development Board keep the Proposed Marvin Nichols Reservoir in the Region D Plan until adequate studies can be conducted to factually determine the total impact of the proposed reservoir on the City of Clarksville and Northeast Texas.

PASSED AND APPROVED on the 17th day of September, 2002.

Honorable Ann Rushing, Mayor

ATTEST:

Lorene Beers, City Secretary

RED RIVER COUNTY

RESOLUTION

WHEREAS, the Red River County Commissioners Court recognizes the significant impact that the Proposed Marvin Nichols I Reservoir could have on the economy and citizens of Red River County, and

WHEREAS, there are certain studies needed on the Proposed Marvin Nichols I Reservoir to identify the effect the reservoir would have on Red River County, and

WHEREAS, the Sulphur River Basin Authority has been duly authorized by the State of Texas to develop all future water resources within the Sulphur River Basin, and

WHEREAS, the Red River County Commissioners Court wishes to support further studies on the Proposed Marvin Nichols I Reservoir related to each possible reservoir site. The studies should address relevant site-specific topics covering mitigation effects (specific location, acres, conditions, timing, etc.), economic effects, effects on local property owners (land/structure value determination, appeal process), effects on taxing entities, future water needs of potential consumers, environmental effects, effects on the agricultural and natural resources, expected normal water level and maximum variations from that level, alternative sources, and alternative viable water management strategies. Upon completion, results of the study shall be summarized in layman's terms so that each citizen will have facts on which rational opinions may be formed.

WHEREAS, the Red River County Commissioners Court is neither for nor against construction of the proposed Marvin Nichols I reservoir,

WHEREAS, the Region D Planning Committee has included the Proposed Marvin Nichols I Reservoir in the Region D Plan, and

WHEREAS, the Texas State Water Development Board has included the Proposed Marvin Nichols I Reservoir in the State Water Plan,

NOW, THEREFORE, BE IT RESOLVED, BY THE COMMISSIONERS COURT OF RED RIVER COUNTY, TEXAS:

That the Region D Planning Committee and the Texas State Water Development Board keep the Marvin Nichols Reservoir I in the Region D Plan as a potential reservoir until adequate studies can be conducted to factually determine the total impact of the proposed reservoir on Red River County and Northeast Texas.

PASSED AND APPROVED on the 25 day of April, 2005.

Powell W. Peck
Powell W. Peck, County Judge

ATTEST:

Lorie Moosc, County Clerk

The Historic Red River County Chamber of Commerce

Resolution No. 4-06

WHEREAS, the Historic Red River County Chamber of Commerce recognizes the significant impact the Marvin Nichols Reservoir could have on the economy and security of water resources for the citizens of Clarksville and Red River County, and ;

WHEREAS, the Historic Red River County Chamber of Commerce has a very futuristic approach and believe to fully address our needs and those of future generations we must glance to the future and plan now for the next 50 years, and;

WHEREAS, the Historic Red River County Chamber of Commerce believes the Marvin Nichols should remain in Region D's Plan so that our region will be allowed to participate in the planning and construction of the reservoir.

**NOW, THEREFORE, BE IT RESOLVED
BY THE HISTORIC RED RIVER COUNTY CHAMBER OF COMMERCE:**

That the Historic Red River County Chamber of Commerce recognizes the economic and water benefits to reap from building the Marvin Nichols and believes the Marvin Nichols should remain in Region D's Plan so that our region may participate in the planning and construction of this reservoir.

PASSED AND APPROVED on the 19 day of APRIL, 2006.

Mac Varley
Mac Varley, President

ATTEST:

Winnifred Bishop

RESOLUTION 2007-04

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CLARKSVILLE, TEXAS, SUPPORTING THE DEVELOPMENT OF THE MARVIN NICHOLS RESERVOIR TO MEET THE LONG-TERM NEEDS FOR A POTABLE WATER SOURCE IN THE NORTHEAST TEXAS REGION; PROVIDING FOR THE PROMOTION OF A UNIQUE RESERVOIR; PROVIDING FOR THE ECONOMIC AND ENVIRONMENTAL DEVELOPMENT OF THE NORTHEAST TEXAS REGION; PROVIDING FOR THE CONSTRUCTION AND MAINTENANCE OF THE MARVIN NICHOLS RESERVOIR; AND CONSIDERING THE LEAST ENVIRONMENTAL DISRUPTION DUE TO MITIGATION.

WHEREAS, the construction of the proposed Marvin Nichols Reservoir would provide the Northeast Texas region with an estimated additional 78 million gallons of water per day; and,

WHEREAS, total economic activity in the five-county area will increase between \$299 million and \$365 million during the dam construction phase, supporting an additional 1,700 to 2,000 person-years of employment; and,

WHEREAS, building the dam, pumping stations, and related infrastructure will boost total state economic activity by \$2.0 billion to \$2.4 billion during the construction phase of the proposed reservoir; and,

WHEREAS, the reservoir and mitigation area represent an estimated 104.7 million cubic feet of local hardwood timber inventories, less than 3 percent of regional totals, where net annual growth adds about 153.9 million cubic feet of hardwood timber to offset any losses; and,

WHEREAS, it is highly likely that legislation will be proposed during the 80th Session of the Texas Legislature which could affect the distribution and management of water resources in the Northeast Texas region;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF CLARKSVILLE, TEXAS:

Section 1. That the Clarksville City Council supports efforts of the Northeast Texas Water Coalition and its mission to work with parties and stakeholders to develop a significant water resource in the Northeast Texas Region.

Section 2. That the Clarksville City Council promotes legislation in the 80th Session of the Texas Legislature that recommends and supports the designation of the Marvin Nichols Reservoir as a unique reservoir in the Northeast Texas region.

Section 3. That an official copy of this resolution be prepared for the Northeast Texas Water Coalition as an expression of support by this body.

Section 4. That an official copy of this resolution be forwarded to our state Senators, Representatives, and the Governor.

SIGNED AND APPROVED THIS 20th DAY OF MARCH 2007.

MAYOR ANN RUSHING
CITY OF CLARKSVILLE

Titus	16.2%	18.1%	25.4%	14.9%

Source: Socrates County Narrative Profiles, US Census Bureau

The Population is Growing Slowly and Aging Rapidly

North East Texas is significantly older than the state as a whole, with 15.3% of its population over the age of 65 and an average age of 37.9, compared with just 9.9% of the statewide population over age 65 and an average age of 34.0. Only in Titus County is the average age lower than for the U.S., a consequence of its higher percentage of children. The younger population profile for Titus County is most likely due to its high percentage of Hispanics. Hispanic families tend to have more children which helps lower the average age of the population.

Age, 2000

	Under 5	5-14	15-19	20-44	45-64	65+
U.S.	6.8%	14.6%	7.1%	37.1%	21.9%	12.4%

Titus	8.6%	16.8%	8.0%	34.6%	19.5%	12.5%

Source: Socrates County Narrative Profiles, US Census Bureau

Population growth in the region is much slower than in the state as a whole and the nation. Population growth varies tremendously within the region, with four counties having double-digit population growth, and two counties (Morris and Red River) with a slightly declining population. Numerically speaking, Bowie experienced the greatest growth over the decade, adding 7,641 people. Franklin only grew by 1,656, but because it was small to begin with, its growth rate is more than double that of Bowie County's.

Population, 1990 & 2000

	1990	2000	Percent Change
U.S.	248,709,873	281,421,906	13.2%
Texas	16,986,510	20,851,820	22.8%
North East Texas	248,614	270,468	8.8%
Bowie	81,665	89,306	9.4%
Cass	29,982	30,438	1.5%
Delta	4,857	5,327	9.7%
Franklin	7,802	9,458	21.2%
Hopkins	28,833	31,960	10.8%
Lamar	43,949	48,499	10.4%
Morris	13,200	13,048	-1.2%
Red River	14,317	14,314	0.0%
Titus	24,009	28,118	17.1%

Source: Socrates County Narrative Profiles, US Census Bureau

North East Texas is only very slightly less diverse than the neighboring Arkansas region, but considerably less diverse than the state and nation. Hispanics are the fastest growing minority group in the US today, and that is true for the North East Texas region. A significant part of that growth is the higher percentage of children of Hispanic origin. In all except Bowie County, Hispanics make up a higher percentage of the child population than of the total population, sometimes significantly so. This has potential implications for the region's educators in terms of English as a Second Language (ESL) instruction and cultural sensitivity issues.

Income Inequities Follow Racial/Ethnic Lines

There is considerable disparity in the economic status of the minority population compared to the white population. In Titus, which is over 28% Hispanic, the per capita income of the white population is \$18,077 per year (2000 Census data), while the per capita income of the Hispanic population is less than half that: \$7,496 per year. In Morris, which is over 24% black, the per capita income of the black population is \$11,779, while the white population's per capita income is \$17,433. Bowie also has a high percentage of black residents (23.4%), and their per capita income is \$10,143 compared to \$19,806 for whites. Income is strongly related to education. Ensuring minority populations have the right foundation skills and financial access to higher education will be important to reducing these inequities.

Labor Force Participation is Low and Unemployment is High

A lower percentage of North East Texans over the age of 16 are in the labor force compared to other areas. Unemployment is higher.

Unemployment varies among the counties. Franklin County consistently has a lower unemployment rate than the other counties and the state average. It also has the lowest rate of poverty for all ages, the highest per capita income, and highest percentage of adults with bachelor's degrees, in addition to having the fastest population growth rate. Morris and Red River counties, on the other hand, have tended to have the highest unemployment rates. They are the two counties that are losing population. They also have the lowest percentage of adults with bachelor's degrees and the highest percentage of young people living in poverty. Red River County has the lowest per capita income. There is definitely a link between educational attainment, unemployment, per capita income, and poverty.

★ Educational Attainment Inadequate to Grow a Knowledge Economy

Competitive communities are educated and highly skilled communities. And—education pays!

Lifetime Earnings by Education in the United States⁴

Education Level	Estimated Work Life Earnings
Less Than 9 th Grade	\$787,400
9 th to 12 th Grade, Non-graduate	\$894,000
High School Grad	\$1,167,480
Some College, No Degree	\$1,373,600
Associate Degree	\$1,455,960
Bachelor's Degree	\$1,878,760
Master's Degree	\$2,263,560
Professional Degree	\$3,296,840
Doctorate	\$3,007,280

Educational Attainment is Far Below Average and Impacts the Economy

North East Texans are less well educated than state averages. While roughly equal numbers hold a high school diploma, the percentage with associate's and bachelor's degrees or higher is significantly lower. In Red River and Titus counties, more than one third of adults over the age of 25 do not have a high school diploma. To the extent that education relates to skills, these low education levels bring concerns about the preparedness of the North East Texas workforce to function in a global economy.

⁴ December, 2003 issue of Texas Labor Market Review

Many Youth are At-Risk

Additionally, North East Texas has a higher percentage of at-risk youth than does the state, nation, or neighboring Arkansas region. **At-Risk Youth** represents the U.S. Census 2000 unemployment rate covering civilian youth age 16-19 not enrolled in school and unemployed. North East Texas has a high rate of young people who are simply not engaged and not prepared to be engaged.

Dropout Rates are Low, but there are Some Serious Trouble Areas

Youth are likely to complete high school in North East Texas. Dropout rates are very low. Nearly all the school districts do better than the state four-year dropout rate of 4.5%. Of the 39 school districts in the region, 15 have a zero percent dropout rate and 24 have a rate below 2%. Only three districts have a higher dropout rate than the state average, but their rate is substantially higher than the average. The Avery district in Red River County tops the list with a 12.5% dropout rate, followed by Avinger (Cass County) at 8.3% and Daingerfield-Lone Star (Morris County) at 7.1%. Morris and Red River have the highest rates of children in poverty in the region, and there is a correlation between poverty and school success.

Clarksville Economic Development Corporation

RESOLUTION

WHEREAS, the Sulphur River Basin Authority has been duly authorized by the State of Texas to develop all future water resources within the Sulphur River Basin, and

WHEREAS, the Clarksville Economic Development Corporation (CEDC) is aware that in order to factually determine the total impact of all present and future water resources there must first be a "Basin Wide Study" so that a project can move forward; and

WHEREAS, the CEDC has a very futuristic approach and of the belief that to fully address our needs and those of future generations we must glance to the future and plan now for the next 50 years, and;

WHEREAS, Clarksville/Red River County is designated as an economically disadvantaged community that would greatly benefit from an additional surface water source for municipal, economic and recreational needs; and

WHEREAS, the Board of Directors, of the CEDC, wish to place the most emphasis on support of first completing the U.S. Army Corps of Engineers Sulphur River Basin Feasibility Study, which includes a review of strategies and reservoir projects; namely Marvin Nichols/Wright Patman/and Parkhouse Sites, in order to gain an understanding of the impacts both positive and negative, that any of these projects produce.

NOW, THEREFORE, BE IT RESOLVED, BY THE CLARKSVILLE ECONOMIC DEVELOPMENT CORPORATION:

That the Clarksville Economic Development Corporation continue to support all efforts by the Sulphur River Basin Authority to complete the U.S.Army Corps of Engineers "Sulphur River Basin Feasibility Study", as quickly as possible, so that factual information may be obtained for use in evaluating water resource development in the Sulphur Basin.

PASSED AND APPROVED on the 1st day of March 2010.

Steve Bishop- President CEDC

ATTEST:

Penny Hobbs, CEDC Clerk

A RESOLUTION OF THE CLARKSVILLE ECONOMIC DEVELOPMENT CORPORATION OF THE CITY OF CLARKSVILLE, TEXAS SUPPORTING THE DEVELOPMENT OF THE MARVIN NICHOLS RESERVOIR TO MEET THE LONG-TERM NEEDS FOR A POTABLE WATER SOURCE IN THE NORTHEAST TEXAS REGION; PROVIDING FOR THE PROMOTION OF A UNIQUE RESERVOIR; PROVIDING FOR THE ECONOMIC AND ENVIRONMENTAL DEVELOPMENT OF THE NORTHEAST TEXAS REGION; PROVIDING FOR THE CONSTRUCTION AND MAINTENANCE OF THE MARVIN NICHOLS RESERVOIR; AND CONSIDERING THE LEAST ENVIRONMENTAL DISRUPTION DUE TO MITIGATION.

WHEREAS, the construction of the proposed Marvin Nichols Reservoir would provide the Northeast Texas region with an estimated additional 78 million gallons of water per day; and,

WHEREAS, total economic activity in the five-county area will increase between \$299 million and \$365 million during the dam construction phase, supporting an additional 1,700 to 2,000 person-years of employment; and,

WHEREAS, building the dam, pumping stations, and related infrastructure will boost total state economic activity by \$2.0 billion to \$2.4 billion during the construction phase of the proposed reservoir; and,

WHEREAS, the reservoir and mitigation area represent an estimated 104.7 million cubic feet of local hardwood timber inventories, less than 3 percent of regional totals, where net annual growth adds about 153.9 million cubic feet of hardwood timber to offset any losses; and,

WHEREAS, it is highly likely that legislation will be proposed during the 80th Session of the Texas Legislature which could affect the distribution and management of water resources in the Northeast Texas region; NOW, THEREFORE,

BE IT RESOLVED BY THE CLARKSVILLE ECONOMIC DEVELOPMENT CORPORATION OF THE CITY OF CLARKSVILLE, TEXAS:

Section 1. That the Clarksville Economic Development Corporation supports efforts of the Northeast Texas Water Coalition and its mission to work with parties and stakeholders to develop a significant water resource in the Northeast Texas Region.

Section 2. That the Clarksville Economic Development Corporation promotes legislation in the 80th Session of the Texas Legislature that recommends and supports the designation of the Marvin Nichols Reservoir as a unique reservoir in the Northeast Texas region.

Section 3. That an official copy of this resolution be prepared for the Northeast Texas Water Coalition as an expression of support by this body.

Section 4. That an official copy of this resolution be forwarded to our state Senators, Representatives, and the Governor.

PASSED AND APPROVED this the 13th day of March 2007.

Donna Townes, President

ATTEST:

Penny Hobbs, Administrative Assistant

RESOLUTION NO. 2005-101

WHEREAS, the Clarksville Economic Development Corporation, known as the CEDC, recognizes the significant impact the Marvin Nichols Reservoir could have on the economy and citizens of Clarksville, and;

WHEREAS, there are certain feasibility studies needed on the Proposed Marvin Nichols Reservoir to identify the effect the reservoir would have on Clarksville, and;

WHEREAS, the CEDC has a very futuristic approach and believe to fully address our needs and those of future generations we must glance to the future and plan now for the next 50 years, and;

WHEREAS, the CEDC, realizes there could be some set backs in some areas; but firmly believe the Marvin Nichols Reservoir will supply water and recreational and economic benefits badly needed in Clarksville and the good will far exceed any negative aspects.

NOW, THEREFORE, BE IT RESOLVED, BY THE CLARKSVILLE ECONOMIC DEVELOPMENT CORPORATION:

That the CEDC continues to support the Marvin Nichols Reservoir, continues to support future studies in an effort to form educated and rational decisions and continues to recognize and acknowledge the economic, recreational and water benefits to reap from building a reservoir such as the Marvin Nichols.

PASSES AND APPROVED on the 13th day of September, 2005.

Bill Jennings, Director

ATTEST:

Penny Hobbs, Secretary

**Red River County Water Control & Improvement District, No.
1, Langford Lake**

RESOLUTION

WHEREAS, the Sulphur River Basin Authority has been duly authorized by the State of Texas to develop all future water resources within the Sulphur River Basin, and

WHEREAS, the Red River County Water Control & Improvement District, No. 1, Langford Lake (WCID) is aware that in order to factually determine the total impact of all present and future water resources there must first be a "Basin Wide Study" so that a project can move forward; and

WHEREAS, the WCID, Red River County, has a very futuristic approach and of the belief that to fully address our needs and those of future generations we must glance to the future and plan now for the next 50 years, and;

WHEREAS, Clarksville/Red River County is designated as an economically disadvantaged community that would greatly benefit from an additional surface water source for municipal, economic and recreational needs; and

WHEREAS, the Board of Directors, of the WCID, wish to place the most emphasis on support of first completing the U.S. Army Corps of Engineers Sulphur River Basin Feasibility Study, which includes a review of strategies and reservoir projects; namely Marvin Nichols/Wright Patman/and Parkhouse Sites, in order to gain an understanding of the impacts both positive and negative, that any of these projects produce.

NOW, THEREFORE, BE IT RESOLVED, BY THE RED RIVER COUNTY WATER CONTROL & IMPROVEMENT DISTRICT, NO. 1, LANGFORD LAKE:

That the WCID Board of Directors, continue to support all efforts by the Sulphur River Basin Authority to complete the U.S. Army Corps of Engineers "Sulphur River Basin Feasibility Study", as quickly as possible, so that factual information may be obtained for use in evaluating water resource development in the Sulphur Basin.

PASSED AND APPROVED on the 22 day of February, 2010.

Scott Lindeman, President, WCID

ATTEST:

Ken Bishop, Board of Director

RED RIVER COUNTY WATER CONTROL & IMPROVEMENT DISTRICT #1

A RESOLUTION

WHEREAS, the Red River County Water Control & Improvement District No. One (WCID) recognizes the significant impact that the Marvin Nichols Reservoir could have on the economy and citizens of Clarksville and Red River County, and

WHEREAS, there are certain feasibility studies needed on the Proposed Marvin Nichols Reservoir to identify the effect the reservoir would have on Clarksville, Red River County and the region, and

WHEREAS, the WCID is of the belief that to fully address our needs and those of future generations we must glance to the future and plan now for the next 50 years, and

WHEREAS, the WCID realizes there could be some set backs in some areas; but firmly believes the Marvin Nichols Reservoir will supply water and recreational and economic benefits badly needed in Red River County and the good will far exceed any negative aspects, and

WHEREAS, the Region D Planning Group had previously included the Proposed Marvin Nichols in the Region D Plan and in fact the Marvin Nichols was the preferred option, and

WHEREAS, the WCID feels that water is your most precious resource, that we must plan for the future and that we can only control the development of what we plan for and take action on.

NOW, THEREFORE, BE IT RESOLVED, BY THE RED RIVER COUNTY WATER CONTROL IMPROVEMENT DISTRICT, #1:

That the WCID continues to support the Marvin Nichols Reservoir, continues to support future studies in an effort to form educated and rational decisions and continues to recognize and acknowledge the economic, recreational and water benefits to reap from building the Marvin Nichols.

That the Region D Planning Group and the Texas State Water Development Board include the Proposed Marvin Nichols Reservoir in the Region D finalized plan.

PASSED AND APPROVED on the 31st day of August, 2005

At the April 26, 2010 meeting, Nancy Clements provided the Study Commission with a copy of the Texas Forest Service Publication 162 “The Economic Impact of the Proposed Marvin Nichols I Reservoir to the Northeast Texas Forest Industry” by Dr. Weihuan Xu. This report was included in the literature review of the Phase 1 contracted work for the Study Commission and is summarized in Appendices A and B to the Phase 1 work.

Region C-D Study Commission Talking Points

Monday, April 26, 2010

Good afternoon, I am Michael Russell, president of The Sulphur River Basin Authority. The SRBA appreciates the opportunity to speak with you today, and we appreciate the many hours of work being put into the Commission's study of water needs in Region C & D. Water issues are very complex and most of us agree that water rights and needs will be a central issue in the continued development of Texas.

Northeast Texas is unique in that it enjoys significant annual rainfall and runoff, and the Sulphur River Basin (in the center of NE TX) is the only basin in the state with large quantities of undeveloped and unpermitted surface water.

Recognizing this abundance of water resources, the SRBA encourages you to support our efforts to move forward with a basin-wide study to take a fresh look at the resources in the basin. As British philosopher Herbert Spencer once said:

"There is a principle which is a bar against all information, which is proof against all arguments, and which cannot fail to keep a man in everlasting ignorance – that principle is condemnation prior to investigation."

SRBA would like to move ahead with such an investigation. We previously sought funding for a basin-wide study and have renewed our efforts in that regard. We have met with the U.S. Army Corps of Engineers and have discussed the possibility of interim funding. I have also talked with Congressman Ralph Hall and have confirmed his support for water resource development. The Corps of Engineers will perform the study and SRBA is the designated local sponsor.

With the goal of providing the water needed by Texans while minimizing negative impacts on the region, the study would provide a fresh look at the available

resources including existing lakes and leave all options open. It would also allow our region to retain control over what is done to meet water needs in the future.

Generally, the Region D Water Planning Group's current IPP seeks to eliminate from the Texas Water Plan any references to potential reservoir sites and other water supplies in the region. SRBA disagrees and believe we should first do the *basin wide study* before any sites are eliminated or any options are closed.

We believe the final NETWP should include a balance of information to encourage a reasonable decision making process. Doing the *basin-wide study* would provide a fresh look at available resources and SRBA is the entity that should carry out the study with the Corps.

SRBA supports progress – not exploitation of our resources at any cost. We support an improved economy in our region and the hope this provides for future generations. SRBA encourages a *reasonable consideration* of all the facts and of the needs of *all Texans*. We support the proposed *basin-wide study* and ask you to join us by supporting our effort to get funding for the Study. And *we welcome your guidance* as we press forward.

**PUBLIC COMMENTS TO THE SB3 STUDY COMMITTEE ON REGIONAL WATER SUPPLY, RE:
THE TRUE PURPOSE OF THE SULPHUR RIVER BASIN FEASIBILITY STUDY**

1. By March, 2002, the Sulphur River Basin Authority (SRBA) completed “Advanced Funding Agreement”(s) with the City of Irving, Upper Trinity Regional Water District, Tarrant Regional Water District, and The North Texas Municipal Water District, for the purpose of developing and constructing the Marvin Nichols Reservoir.

“**WHEREAS**, Authority desires to develop and construct the Marvin Nichols Reservoir Project in the Sulphur River Basin (. . . “The Reservoir Project” . . .) . . .

“**WHEREAS**, Participant seeks to participate in the funding of the development, construction, and operation of The Reservoir Project in exchange for Credits towards the purchase of water and an option to participate in The Reservoir Project if it is ultimately developed, constructed, and developed.”

The Advanced Funding Agreement created the Joint Committee for Program Development (JCPD), comprised of the above parties, to coordinate the successful development of the “Reservoir Project”.

2. On December 2, 2005, the final report on the Marvin C. Nichols Reservoir “Site Selection Study” was issued by the Sulphur Basin Group (SBG), the engineering group contracted by SRBA and paid with Advanced Funding. The total amount billed for this portion of work on the “Project” was \$657,434.42. The preferred site for the reservoir was called Marvin Nichols IA (MNIA), the same site now known as a “Unique Reservoir Site”
3. In this “Site Selection Study” one finding is “MNIA would submerge the “logjam” and “would partially resolve many of the concerns related to the logjam.” These concerns had been raised by the public attending SRBA meetings, charging SRBA with maintaining the integrity of the Sulphur River under its authority, including clearing logjams impeding flow downstream, causing unnatural flooding and degradation of human and natural habitat.
4. On November 18, 2003, SRBA notified USACOE, that it would be willing to enter into an agreement with USACOE for the purpose of a Sulphur River Basin Feasibility Study. The authority of this study is cited as “House Document 488, 83rd Congress, 2nd Session, and other pertinent reports, to determine whether modifications are warranted to address water and related resources problems in the Sulphur River basin, Texas. Special emphasis shall be given to the need for flood damage reduction, environmental restoration and protection, and related measures to remove and control log jams on the Sulphur River, Texas, below Cooper Lake.”
5. The Project Management Plan for the Sulphur River Basin Feasibility Study was entered into in February of 2005, between SRBA (local sponsor) and USACOE with the primary

objective to “develop additional water supply . . . defined as 619,000 acre feet of additional water supply yield to be obtained from the Sulphur River Basin in the 2002 State Water Plan,” This is the approximate yield of Marvin Nichols IA. Somehow the authorization to clean up the river is construed to develop new water supply identified in the Texas State Water Plan.

6. As of March 2007, the original Advanced Funding Agreements were amended, not to encompass funding of the Feasibility Study, but merely to extend the termination date of the Agreements, so that they would extend through the expected completion date of the Feasibility Study. The Participants in the Agreements, through SRBA and SBG, have funded the local sponsor’s share of the Feasibility Study under the purpose as stated in those Agreements “to develop, construct and operate the Reservoir Project” – Marvin Nichols Reservoir. Apparently no contract exists among the JCPD members to provide funding for a “basin wide feasibility study”.
7. The SB3 Study Committee has already been advised that raising Wright Patman Reservoir to provide that approximately 619,000 acre feet of water supply would have no impact upstream of the Wright Patman geography. No feasibility study is necessary upstream of Wright Patman environs except for the purpose of cleaning up the environmental consequences of channel straightening or for the purpose of constructing new reservoirs, i.e. Marvin Nichols and the Parkhouse reservoirs.

CONCLUSION

Continuing or completing the “Sulphur River Basin Feasibility Study”, for identifying sources of additional water supply, is not necessary for fully utilizing Wright Patman, only for developing new reservoirs upstream on the Sulphur River, i.e. Marvin Nichols.

John McConnell, September 27, 2010

RECOMMENDATIONS FOR CHANGES TO DRAFT REPORT TO THE 82ND LEGISLATURE

SUMMARY

Changes [to the draft report](#) are recommended in three areas:

1) Changes to the Organization of the Report:

Instead of listing findings and recommendations separately, they could be linked to the Legislative Charges. Not doing that creates confusion and obscures the fact that some findings and recommendations do not address the charges. Disconnecting findings and recommendations from the charges might make it appear to some that there is an attempt to hide the fact that the study commission was unable to address some of the charges. It would seem a better approach simply to state where the requested evaluations in the charges could be done and where they could not or were not done.

2) Changes to the findings.

Some findings failed to include information provided to the committee. For example, there is no finding on the amount of water that could be obtained from Toledo Bend, despite the fact that the Sabine River Authorities in both Texas and Louisiana have indicated that significant amounts of water are available and could be used by Region C. Many findings failed to acknowledge that the work proposed in the charges could not be completed or was not completed.

3) Changes to Recommendations:

Expanding the recommendations would be appropriate. Not all charges were addressed. Some recommendations need limits or conditions added to them. For example, a recommendation on how the state could obtain a study on innovative methods of compensation might be appropriate and helpful for the Legislature. In addition, the recommendation for a comprehensive Sulphur River study should provide that the study plan must be acceptable to both Region C and D, not be sponsored by any entity not acceptable to both Regions, not carried out by anyone who was prohibited to work for the Study Commission, and, if funding for a full study is not available for the Corps, the priorities, such as the work for expansion of Lake Wright Patman.

I also suggest that some **significant edits are needed**.

Finally, because, in addition to the request by the legislature for the type of findings and conclusions proposed here, the Legislature requested a recommendation on Marvin Nichols, a specific recommendation will be needed. In the draft report, there is a recommendation on unique sites being retained. That may have been an effort to address the Legislature's request.

The recommendation here is, however, not to seek a finding or recommendation on unique reservoir sites, and thus delete that recommendation. In its place the following is suggested. It is not included in the Attachment, since it is not in response to any charge.

Construction of the Marvin Nichols reservoir is still an option. Whether it will be needed depends upon how other options develop. Thus, for example, the study commission recommends putting a higher

priority on development of water supplies from 1) existing reservoirs, including Wright Patman and Toledo Bend, and ground water sources. With those sources and continuation of serious conservation activities, Marvin Nichols may not be needed in the foreseeable future.

DISCUSSION

I. Organization of the Report: I recommend two changes:

A. Combine the Legislative Charges on page 2 that involve membership with the section above it on Members. The report will be clearer and not repetitive.

B. Combine the 8 Legislative Charges in subsection (e) on pages 2 & 3 with the findings and recommendations, so the findings and recommendations are related directly to the charges.

II. Findings:

A. Where charges could not be completed:

As finding 6 indicates for social-economic issues, "No formal socioeconomic impact analysis has been conducted...." The finding explains why it was not. This finding relates directly to Legis. Charge 2 and could be married to that charge.

That same explicit approach was not used for other charges where there was also no formal analysis. Combining all the charges with the respective findings provides a clearer response to the Legislature's requests. Thus, as with the social-economic finding, similar language could be provided for the charges for mitigation issues and methods of compensation:

1) Mitigation: Charge 4 & 8 which are addressed in part in current finding 10 and 14. An explicit explanation of why those charges were or could not be completed is needed.

2) Methods of compensation: For Charge 6, Finding 12 appears to blame the Legislature, and does not explain why no innovative methods were reviewed or analyzed by the study commission.

B. Other Charges:

Attachment A below provides all of the Legislative charges together with proposals for findings for each charge. (Recommendations based on the findings are included, for almost all charges.) Where possible, the proposed findings are based on the findings in the draft report that these comments address.

III. Recommendations:

A. Recommendation for a "Feasibility Study:

An implicit assumption in the report appears to be that a Corps of Engineers watershed study will resolve most issues. It will not.

First, a number of the Legislatures charges will not be addressed in any such Corps study. One example is the issue of innovative compensation.

Second, the Corps of Engineers is apparently proposing a comprehensive Sulphur River watershed study, only one part of which could be a feasibility study. (Federal funding would be required and is not guaranteed for all or any part of the type of study the Commission may contemplate.) The first step for the Corps is usually a reconnaissance study, to identify the issues to be addressed in the second stage of the work. This reconnaissance study could include a wide range of issues, not just water supply.

For, example, the reconnaissance work is underway for a comprehensive watershed study for the Cypress Basin. While increasing the yield from Lake O' the Pines is on the list of potential issues to study, so are issues of restoration of habitat and flows to reestablish the endangered paddlefish. Federal funding has not been obtained for the follow-up comprehensive work that could include feasibility studies.

Moreover, there is work that could be done to address a number of charges that the Study Commission did not address, due to time, funds or complexity, such as innovative compensation. This report should make recommendations for work on such issues. The recommendations could, for example, include a continuation of the study commission for two more years, TWDB studies or other steps to get the information the Legislature requested.

B. Other Recommendations:

Attachment A provides all of the Legislative charges with proposed recommendations for most.

IV. Edits:

Page 1, last paragraph, last sentence:

Because the TWDB decided that there was no over-allocation of sources of supply, the governing board of the TWDB approved the 2006 Region C Regional Water Plan.

Other edits are found in the findings and recommendations in Attachment A.

ATTACHMENT A
CHARGES, FINDINGS AND RECOMMENDATIONS
**(Where findings from the draft report are included, any proposed edits,
revisions or additions are included as redlines or strikeouts.)**

Charge (1) Review the water supply alternatives available to the Region C Regional Water Planning Area, including obtaining additional water supply from Wright Patman Lake, Toledo Bend Reservoir, Lake Texoma, Lake O' the Pines, other existing and proposed reservoirs, and groundwater;

Finding: (From draft report findings 1, 2, 3 are dropped and 4, 5, 7 and 14 used but edited as shown below and with several additional finding)

(4) Region C has incorporated a multiple water management strategy approach that involves a significant development of supply located within the Region D planning area, as well as possible future water supplies from Lake Texoma, ~~Lake O' the Pines~~ (Note – no reason to include Lake O' the Pines, since it is in Region D) Toledo Bend Reservoir, Oklahoma, and two new reservoirs located within Region C.

(5) Existing groundwater supplies in Region C are declining and cannot support the Region's projected population growth over the planning period.

(7) If all existing or developed surplus water supply in Region D is made available to meet Region C's long-term needs, sufficient water may not be available to meet unanticipated industrial, population and/or instream flow needs in Region D towards the end of the current planning period.

(14) In order to identify the location of proposed reservoir sites, changes needed for existing reservoir sites and proposed mitigation sites, a watershed study by the U. S. Army Corps of Engineers could be completed.

In addition, to respond to the charge, the following should be added

Water supply alternatives available to Region C Regional Water Planning Area are available from Wright Patman Lake, Toledo Bend Reservoir, Lake Texoma, Lake O' the Pines as they exist and from groundwater.

The Sabine River Authority of Texas has indicated that Toledo Bend has available from the Texas portion of the water over 1 million acre feet per year of minimum firm yield. SRA-Texas has, in the past, expressed interest in making this water available to Region C, and continues to express this interest. SRA-Louisiana has an equal amount and has indicated an interest in selling water to Region C. Freese and Nichols has completed a study that examined and found feasible the transfer of a more limited amount of water - 500,000 ac/ft/yr to Region C and 100,00 ac/ft/yr to Region D.

Additional supplies could be available with changes in the operations of Wright Patman Lake and Lake O' the Pines. Additional supplies could also be obtained from new reservoirs, including Marvin Nichols.

The extent of water that may be available from Lake Texoma was not analyzed.

Recommendation: (Draft report 1 with additions) A Sulphur River watershed study should be completed by the U.S. Army Corps of Engineers. It should be designed to be acceptable to the regional water planning groups of Region C and D. The local sponsor should be acceptable to both regional planning groups. No work should be carried out by any entity prohibited from assisting the Study Commission under subsection (f) of the law creating the study commission. If full federal funding is not available for the entire watershed and all options, the Corps' priorities should be on expansion of Lake Wright Patman and conjunctive use of Jim Chapman reservoir.

(Draft report 3) Before a new reservoir is constructed in Region D to serve water needs in Region C, additional water supplies must first be developed to the maximum extent possible from Wright Patman Reservoir and such supply determined to be surplus shall be made available to Region C in a manner equivalent to a similar amount of water supply being made available from the Marvin Nichols project.

Charge (2) In connection with the review under Subdivision (1) of this subsection, analyze the socioeconomic effect on the area where the water supply is located that would result from the use of the water to meet the water needs of the Region C Regional Water Planning Area, including:

- (A) the effects on landowners, agricultural and natural resources, businesses, industries, and taxing entities of different water management strategies; and
- (B) in connection with the use by the Region C Regional Water Planning Area of water from Wright Patman Lake, the effect on water availability in that lake and the effect on industries relying on that water availability;

Finding: (Draft report finding 6)

(6) Due to the narrow focus of previous socio-economic studies, a specific methodology needs to be developed that recommends techniques and/or guidelines for conducting future socioeconomic analysis so as to produce analyses, which are significantly broad in scope. Previously, studies have been done on different Marvin Nichols projects. No formal socioeconomic impact analysis has been conducted on Wright Patman Lake or Lake O' the Pines as possible water supply alternatives.

Recommendation: (New) TWDB should fund a study to establish a methodology to be used in Texas for socioeconomic analysis. The U.S. Army Corps of Engineers should be asked to complete such an analysis as part of any watershed study for the Sulphur River basin. If the Corps does not complete such an analysis, it should be done with funding by the TWDB and input from the Region C and D planning groups.

Charge (3) Determine whether water demand in the Region C Regional Water Planning Area may be reduced through additional conservation and reuse measures so as to postpone the need for additional water supplies;

Finding: (Draft report with findings 8 and 9 with edits plus one additional finding.)

8) If Region C achieves the same level of gallons per day per capita (GPCD) as Region D, demand in Region C would be reduced and would postpone the need for some additional water supplies.

9) As shown in the 2010 Region C Water Plan, [the Region C Regional Water Planning Group has found that](#) Region C has implemented and/or will implement more conservation and reuse strategies to meet future water supply needs than any other planning region in the State of Texas.

Add:

There are opportunities for further expansion of reuse to meet future demands. Water demand in Region C could also be reduced through additional conservation and reuse measures. The extent of such reduction and its impact on the need for any of the options for additional water supplies was not analyzed.

Recommendation: None.

Charge (4) Evaluate measures that would need to be taken to comply with the mitigation requirements of the United States Army Corps of Engineers in connection with any proposed new reservoirs, including identifying potential mitigation sites;

Finding: (Draft report finding 10 plus one additional finding.)

(10) The intent of mitigation is to achieve the federal goal of “no net loss of wetlands.” The goal of “no net loss of wetlands” is part of the purpose of the federal Clean Water Act. The determination of what exactly must be mitigated and how it must be mitigated is established during the permitting stage of a project. For planning purposes, it is possible to anticipate some of the mitigation requirements by reviewing the current law involving mitigation and making reasonable inferences about the application of those laws to possible projects. Since the application of the mitigation laws have been adjusted in the last five years and the application of the mitigation laws using the current guidance is relatively new, it is not possible to determine with certainty the exact location or type of mitigation for any project until the decisions are made for that particular project.

Add:

No evaluation of the measures that would need to be taken for new reservoirs was done. Such an evaluation could be done by the U.S Army Corps of Engineers as part of a watershed study for the Sulphur River Basin.

Recommendation: (New) Texas should request that an evaluation of the measures needed for mitigation for any proposal for a new reservoir in the Sulphur Basin be done by the U.S Army Corps of Engineers as part of a watershed study for the Sulphur River Basin. In the absence of a federal watershed study, an evaluation of the measures needed for mitigation should be funded by TWDB with input from the Region C and D planning groups.

Charge (5) Consider whether the mitigation burden described by Subdivision (4) of this subsection may be shared by the Regions C and D Regional Water Planning Areas in proportion to the allocation to each region of water in any proposed reservoir;

Finding: (Draft report finding 11 plus one additional finding.)

(11) Current mitigation laws demonstrate a preference for mitigation banking and it is possible for some portion of the mitigation areas to be outside of the basin where the impacts are located. It is

also possible for the mitigation areas to be out of kind in relation to the impact that is being mitigated.

Recommendation: (Draft report recommendation 4) To the extent possible, mitigation of any project developed in Region D to serve water needs in Region C shall be shared by both Regions based on permanency of supply and amount of water supply furnished to each Region.

Charge (6) Review innovative methods of compensation to affected property owners, including royalties for water stored on acquired properties and annual payments to landowners for properties acquired for the construction of a reservoir to satisfy future water management strategies;

Finding: (Draft report finding 12 plus one additional finding.)

(12) Innovative methods of compensation to property owners affected by a water supply project have been considered by the 80th and 81st Legislature; however, no consensus has been reached nor has any legislation passed relating to this issue. This issue will require further evaluation by future legislatures.

Add:

No attempt was made by the Study Commission to identify, review or evaluate innovative methods of compensation to affected property owners due to time and resource limitations. Such work is, however, needed.

Recommendation: (New) TWDB should seek funding for an independent study of such innovative methods of compensation and provide the information to the Legislature and all regional water planning groups

Charge (7) Evaluate the minimum number of surface acres required for the construction of proposed reservoirs in order to develop adequate water supply;

Finding: (Draft report finding 13)

(13) The minimum number of surface acres required for the construction of Marvin Nichols Dam Site 1A or for increasing the operating elevation of Wright Patman is shown in tables that follow...

Recommendation: None.

Charge (8) Identify the locations of proposed reservoir sites and proposed mitigation sites, as applicable, as selected in accordance with existing state and federal law, in the Regions C and D Regional Water Planning Areas using satellite imagery with sufficient resolution to permit land ownership to be determined.

Finding: (One new finding)

This work was not completed due to time and resource constraints. It is needed to provide landowners a basic understanding of possible state actions in the future.

Recommendation: (New) TWDB should seek funding for the work and make the information available on line to the public and so it can be used by the U.S. Army Corps of Engineers to use as part of any watershed study for the Sulphur River Basin.
